## COVID-19 (Antigen)                                       NEGATIVE    ⌄

**Should I get a lab-processed test to confirm the result of my rapid antigen test?**
The Rhode Island Department of Health recommends confirmatory testing if:
You have symptoms (https://covid.ri.gov/covid-19-prevention/about-covid-19-disease) and get a negative result on your rapid antigen test.
You do not have symptoms (https://covid.ri.gov/covid-19-prevention/about-covid-19-disease) and get a positive result on your rapid antigen test.

Your confirmatory test must be a lab-processed nucleic acid amplification test (NAAT) or polymerase chain reaction (PCR) test. You cannot use an at-home NAAT or PCR test to confirm your rapid antigen test result.

## Continue to protect your household from COVID-19:

**Wear a mask** indoors near anyone you don't live with. Your mask should fit snugly but comfortably over your nose, mouth, and chin without any gaps.

**Watch your distance** by staying at least three feet apart indoors from people you dont live with.

**Get tested** after there's any chance you may have been exposed to COVID-19. Learn more about testing requirements for close contacts at covid.ri.gov/whattodo.

**Get vaccinated against COVID-19.**
Click here to find a vaccine clinic near you. (https://www.vaccinateri.org/)
If you need help scheduling an appointment, call **401-222-8022**.
Learn more about opportunities for vaccination in Rhode Island. (https://covid.ri.gov/vaccination?language=en)
